

## Build Data Warehouse and Explore WEKA

Downloading and/or installation of WEKA data mining toolkit

Install Steps for WEKA a Data Mining Tool

<http://www.cs.waikato.ac.nz/ml/weka/downloading.html>

1. Download the software as your requirements from the below given link.  
<http://www.cs.waikato.ac.nz/ml/weka/downloading.html>
2. The Java is mandatory for installation of WEKA so if you have already Java on your machine then download only WEKA else download the software with JVM.
3. Then open the file location and double click on the file

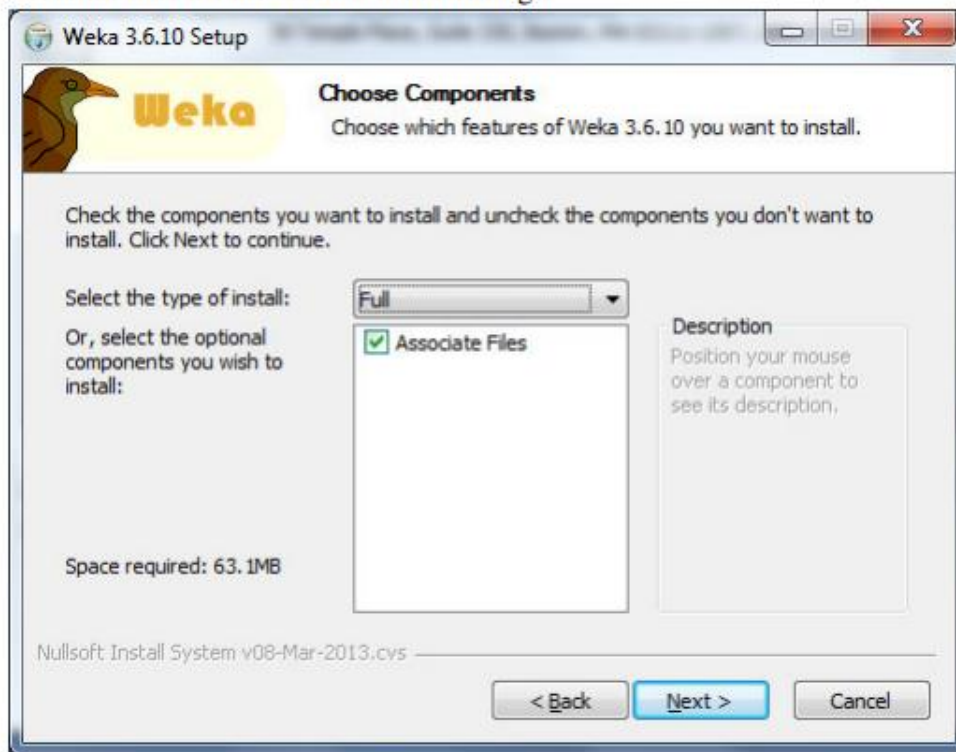

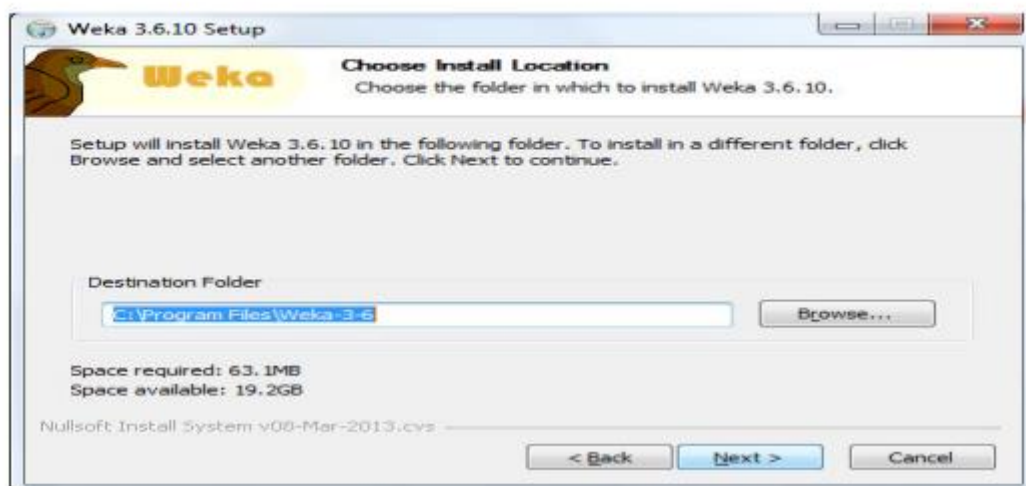

5. Click I Agree.

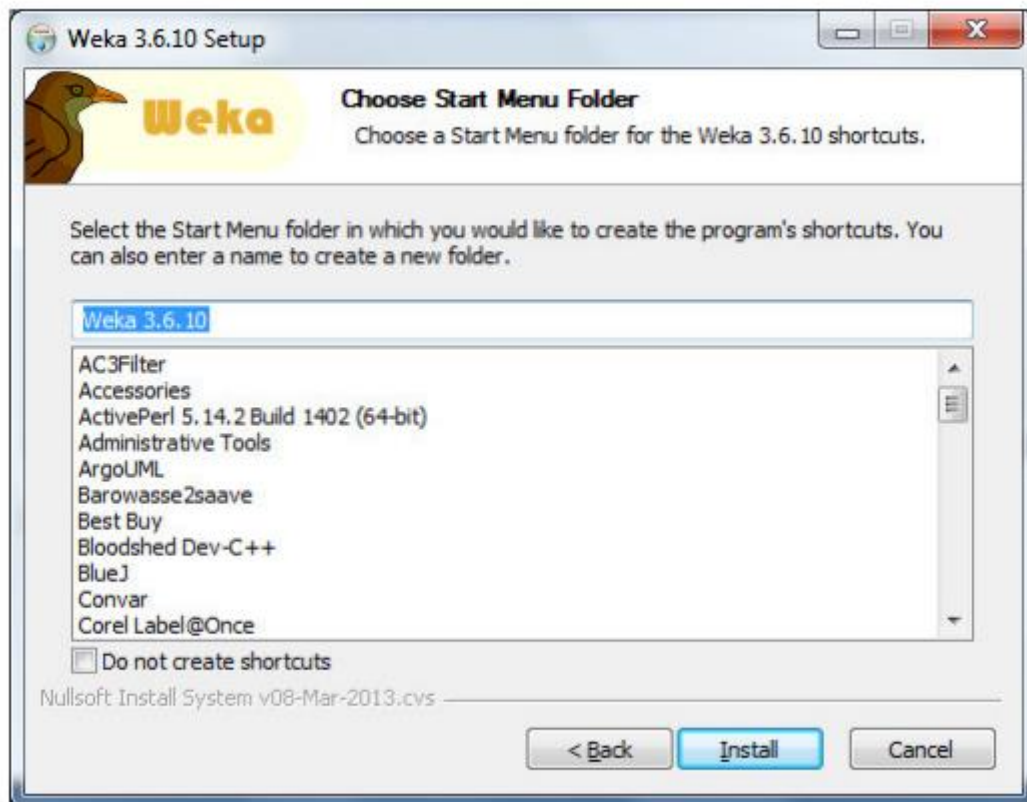

6. As your requirement do the necessary changes of settings and click Next. Full and Associate files are the recommended settings.

7. Change to your desire installation location.

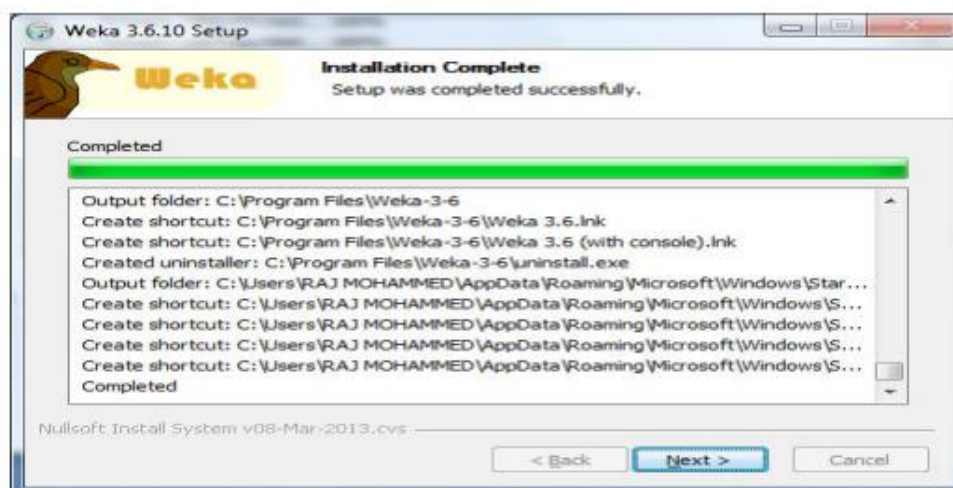

8. If you want a shortcut then check the box and click Install.

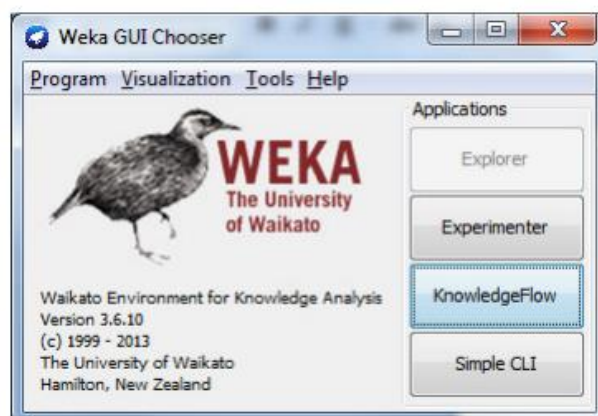

9. The Installation will start wait for a while it will finish within a minute.

10. After complete installation click on Next.

11. Hurray !!!!!!! That's all click on the Finish and take a shovel and start Mining. Best of Luck.

This is the GUI you get when started. You have 4 options Explorer, Experimenter, KnowledgeFlow and Simple CLI.
